

## 具有 可选增益和自动恢复短路保护的 **3.2W** 单声道 **D** 类音频功率放大器

查询样品: [TPA2038D1](#)

### 特性

- 无滤波器单声道 **D** 类扬声器放大器
- **6dB** 和 **12dB** 间的增益引脚选择
- **5V** 电源 (**10%** 总谐波失真 + 噪声 (**THD + N**)) 提供 **3.2W** 功率进入 **4Ω** 负载
- 功能强大的单声道 **D** 类扬声器放大器
  - 在 **5V** 电源提供 **1.4W** 功率进入 **8Ω** 时为 **1%**
  - 在 **5V** 电源提供 **2.5W** 功率进入 **4Ω** 时为 **1%**
- 集成图像抑制滤波器用于 **DAC** 降噪
- **20μV** 低输出噪声
- **1.5mA** 低静态电流
- 自动恢复短路保护
- 热过载保护
- **9** 焊球, **1.21mm x 1.16mm 0.4mm** 焊球间距晶圆级芯片封装 (**WCSP**)

### 应用范围

- 无线或者蜂窝手持电话和个人数据助理(**PDA**)
- 便携式导航设备
- 普通便携式音频器件

### 说明

TPA2038D1 是一款 3.2W 功率进入 4 欧姆负载 (10% THD) 高效无滤波器 **D** 类音频功率放大器。增益引脚将增益设定为 6dB 或 12dB。

诸如 95% 的效率, 1.5mA 静态电流, 0.5μA 关断电流, 81dB 电源抑制比 (PSRR), 20μV 输出噪声和改进的射频 (RF) 抗扰度使得 TPA2038D1 **D** 类放大器非常适合于蜂窝手机应用。无接通爆音的 4ms 内启动时间。

TPA2038D1 采用 1.21mm x 1.16mm, 0.4 焊球间距晶圆级芯片封装 (**WCSP**)。

### 应用电路

**TPA2038D1**  
**9-BALL 0.4mm PITCH**  
**WAFER CHIP SCALE PACKAGE (YFF)**

Please be aware that an important notice concerning availability, standard warranty, and use in critical applications of Texas Instruments semiconductor products and disclaimers thereto appears at the end of this data sheet.

# TPA2038D1

ZHCS466A –AUGUST 2011–REVISED OCTOBER 2012

www.ti.com.cn

These devices have limited built-in ESD protection. The leads should be shorted together or the device placed in conductive foam during storage or handling to prevent electrostatic damage to the MOS gates.

## ORDERING INFORMATION

| T <sub>A</sub> | PACKAGED DEVICES <sup>(1)</sup> | PART NUMBER <sup>(2)</sup> | SYMBOL |
|----------------|---------------------------------|----------------------------|--------|
| -40°C to 85°C  | 9-ball WCSP                     | TPA2038D1YFFR              | QWK    |
|                |                                 | TPA2038D1YFFT              | QWK    |

- (1) For the most current package and ordering information, see the Package Option Addendum at the end of this document, or see the TI Web site at [www.ti.com](http://www.ti.com)
- (2) The YFF package is only available taped and reeled. The suffix "R" indicates a reel of 3000, the suffix "T" indicates a reel of 250.

## ABSOLUTE MAXIMUM RATINGS

over operating free-air temperature range, T<sub>A</sub> = 25°C (unless otherwise noted)<sup>(1)</sup>

## FUNCTIONAL BLOCK DIAGRAM

### TEST SETUP FOR GRAPHS

1.  $C_1$  was shorted for any common-mode input voltage measurement. All other measurements were taken with  $C_1 = 0.1 \mu\text{F}$  (unless otherwise noted).
2.  $C_{S1} = 0.1 \mu\text{F}$  is placed very close to the device. The optional  $C_{S2} = 10 \mu\text{F}$  is used for datasheet graphs.
3. The 30 kHz low-pass filter is required even if the analyzer has an internal low-pass filter. An RC low-pass filter (1 k $\Omega$ , 4700 pF) is used on each output for the data sheet graphs.

## TYPICAL CHARACTERISTICS

PVDD = VDD = 3.6 V,  $C_I = 0.1 \mu\text{F}$ ,  $C_{S1} = 0.1 \mu\text{F}$ ,  $C_{S2} = 10 \mu\text{F}$ ,  $T_A = 25^\circ\text{C}$ ,  $R_L = 8 \Omega$  (unless otherwise noted)

## APPLICATION INFORMATION

### SHORT CIRCUIT AUTO-RECOVERY

When a short-circuit event occurs, the TPA2038D1 goes to shutdown mode and activates the integrated auto-recovery process whose aim is to return the device to normal operation once the short-circuit is removed. This process repeatedly examines (once every 100 ms) whether the short-circuit condition persists, and returns the device to normal operation immediately after the short-circuit condition is removed. This feature helps protect the device from large currents and maintain a good long-term reliability.

### INTEGRATED IMAGE REJECT FILTER FOR DAC NOISE REJECTION

In applications which use a DAC to drive Class-D amplifiers, out-of-band noise energy present at the DAC's image frequencies fold back into the audio-band at the output of the Class-D amplifier. An external low-pass filter is often placed between the DAC and the Class-D amplifier in order to attenuate this noise.

The TPA2038D1 has an integrated Image Reject Filter with a low-pass cutoff frequency of 130 kHz, which significantly attenuates this noise. Depending on the system noise specification, the integrated Image Reject Filter may help eliminate external filtering, thereby saving board space and component cost.

### COMPONENT SELECTION

Figure 42 shows the TPA2038D1 typical schematic with differential inputs, while Figure 43 shows the TPA2038D1 with differential inputs and input capacitors. Figure 44 shows the TPA2038D1 with a single-ended input.

#### Decoupling Capacitors ( $C_{S1}$ , $C_{S2}$ )

The TPA2038D1 is a high-performance class-D audio amplifier that requires adequate power supply decoupling to ensure the efficiency is high and total harmonic distortion (THD) is low. For higher frequency transients, spikes, or digital hash on the line, a good low equivalent-series-resistance (ESR) ceramic capacitor  $C_{S1} = 0.1 \mu\text{F}$ , placed as close as possible to the device  $V_{DD}$  lead works best. Placing  $C_{S1}$  close to the TPA2038D1 is important for the efficiency of the class-D amplifier, because any resistance or inductance in the trace between the device and the capacitor can cause a loss in efficiency. For filtering lower-frequency noise signals, a  $10 \mu\text{F}$  or greater capacitor ( $C_{S2}$ ) placed near the audio power amplifier would also help, but it is not required in most applications because of the high PSRR of this device. Typically, the smaller the capacitor's case size, the lower the inductance and the closer it can be placed to the TPA2038D1. X5R and X7R dielectric capacitors are recommended for both  $C_{S1}$  and  $C_{S2}$ .

#### Input Capacitors ( $C_I$ )

The TPA2038D1 does not require input coupling capacitors if the design uses a differential source that is biased within the common-mode input voltage range. That voltage range is listed in the Recommended Operating Conditions table. If the input signal is not biased within the recommended common-mode input range, such as in needing to use the input as a high pass filter, shown in Figure 43, or if using a single-ended source, shown in Figure 44, input coupling capacitors are required. The same value capacitors should be used on both  $\text{IN}+$  and  $\text{IN}-$  for best pop performance. The 3 dB high-pass cutoff frequency  $f_C$  of the filter formed by the input coupling capacitor  $C_I$  and the input resistance  $R_I$  (typically  $150 \text{ k}\Omega$ ) of the TPA2038D1 is given by Equation 1:

$$f_C = \frac{1}{(2\pi R_I C_I)} \quad (1)$$

The value of the input capacitor is important to consider as it directly affects the bass (low frequency) performance of the circuit. Speaker response may also be taken into consideration when setting the corner frequency using input capacitors. Solving for the input coupling capacitance, we get:

$$C_I = \frac{1}{(2\pi R_I f_C)} \quad (2)$$

If the corner frequency is within the audio band, the capacitors should have a tolerance of  $\pm 10\%$  or better, because any mismatch in capacitance causes an impedance mismatch at the corner frequency and below.

## TPA2038D1

ZHCS466A –AUGUST 2011–REVISED OCTOBER 2012

www.ti.com.cn

For a flat low-frequency response, use large input coupling capacitors (0.1  $\mu$ F or larger). X5R and X7R dielectric capacitors are recommended.

Figure 43. TPA2038D1 Application Schematic With Differential Input and Input Capacitors

Figure 44. TPA2038D1 Application Schematic With Single-Ended Input

## EFFICIENCY AND THERMAL INFORMATION

The maximum ambient operating temperature of the TPA2038D1 depends on the load resistance, power supply voltage and heat-sinking ability of the PCB system. The derating factor for the YFF package is shown in the dissipation rating table. Converting this to  $\theta_{JA}$ :

$$\theta_{JA} = \frac{1}{\text{Derating Factor}} \quad (3)$$

Given  $\theta_{JA}$  (from the Package Dissipation ratings table), the maximum allowable junction temperature (from the Absolute Maximum ratings table), and the maximum internal dissipation (from Power Dissipation vs Output Power figures) the maximum ambient temperature can be calculated with the following equation. Note that the units on these figures are Watts RMS. Because audio contains crest factors (ratio of peak power to RMS power) from 9–15 dB, thermal limitations are not usually encountered.

$$T_{A\text{Max}} = T_{J\text{Max}} - \theta_{JA} P_{D\text{max}} \quad (4)$$

The TPA2038D1 is designed with thermal protection that turns the device off when the junction temperature surpasses 150°C to prevent damage to the IC. Note that the use of speakers less resistive than 4  $\Omega$  (typ) is not advisable. Below 4  $\Omega$  (typ) the thermal performance of the device dramatically reduces because of increased output current and reduced amplifier efficiency. The Absolute Maximum rating of 3.2  $\Omega$  covers the manufacturing tolerance of a 4  $\Omega$  speaker and speaker impedance decrease due to frequency.  $\theta_{JA}$  is a gross approximation of the complex thermal transfer mechanisms between the device and its ambient environment. If the  $\theta_{JA}$  calculation reveals a potential problem, a more accurate estimate should be made.

## WHEN TO USE AN OUTPUT FILTER

Design the TPA2038D1 without an Inductor / Capacitor (LC) output filter if the traces from the amplifier to the speaker are short. Wireless handsets and PDAs are great applications for this class-D amplifier to be used without an output filter.

The TPA2038D1 does not require an LC output filter for short speaker connections (approximately 100 mm long or less). A ferrite bead can often be used in the design if failing radiated emissions testing without an LC filter; and, the frequency-sensitive circuit is greater than 1 MHz. If choosing a ferrite bead, choose one with high impedance at high frequencies, but very low impedance at low frequencies. The selection must also take into account the currents flowing through the ferrite bead. Ferrites can begin to lose effectiveness at much lower than rated current values. See the EVM User's Guide (SLOU298) for components used successfully by TI.

Figure 45 shows a typical ferrite-bead output filter.

Figure 45. Typical Ferrite Chip Bead Filter

## PRINTED CIRCUIT BOARD LAYOUT

In making the pad size for the WCSP balls, it is recommended that the layout use non-solder-mask-defined (NSMD) land. With this method, the solder mask opening is made larger than the desired land area, and the opening size is defined by the copper pad width. Figure 46 shows the appropriate diameters for a WCSP layout.

**Figure 46. Land Pattern Image and Dimensions**

| SOLDER PAD DEFINITIONS         | COPPER PAD | SOLDER MASK OPENING <sup>(5)</sup> | COPPER THICKNESS    | STENCIL OPENING <sup>(6)(7)</sup>         | STENCIL THICKNESS |
|--------------------------------|------------|------------------------------------|---------------------|-------------------------------------------|-------------------|
| Non-solder-mask-defined (NSMD) | 0.23 mm    | 0.310 mm                           | 1 oz max (0.032 mm) | 0.275 mm x 0.275 mm Sq. (rounded corners) | 0.1 mm thick      |

1. Circuit traces from NSMD defined PWB lands should be 75  $\mu$ m to 100  $\mu$ m wide in the exposed area inside the solder mask opening. Wider trace widths reduce device stand off and impact reliability.
2. Best reliability results are achieved when the PWB laminate glass transition temperature is above the operating range of the intended application.
3. Recommend solder paste is Type 3 or Type 4.
4. For a PWB using a Ni/Au surface finish, the gold thickness should be less 0.5  $\mu$ m to avoid a reduction in thermal fatigue performance.
5. Solder mask thickness should be less than 20  $\mu$ m on top of the copper circuit pattern
6. Best solder stencil performance is achieved using laser cut stencils with electro polishing. Use of chemically etched stencils give inferior solder paste volume control.
7. Trace routing away from WCSP device should be balanced in X and Y directions to avoid unintentional component movement due to solder wetting forces.

**Figure 47. Layout Snapshot**

An on-pad via is not required to route the middle ball B2 ( $PV_{DD}$ ) of the TPA2038D1. Short ball B2 ( $PV_{DD}$ ) to ball B1 ( $V_{DD}$ ) and connect both to the supply trace as shown in Figure 47. This simplifies board routing and saves manufacturing cost.

**PACKAGE DIMENSIONS**

| TPA2038D1YFFT.B               | Active        | Production           | DSBGA (YFF)   9 | 250   SMALL T&R       | Yes         | SNAGCU                               | Level-1-260C-UNLIM                | -40 to 85    | QWK                 |

<sup>(1)</sup> **Status:** For more details on status, see our [product life cycle](#).

<sup>(2)</sup> **Material type:** When designated, preproduction parts are prototypes/experimental devices, and are not yet approved or released for full production. Testing and final process, including without limitation quality assurance, reliability performance testing, and/or process qualification, may not yet be complete, and this item is subject to further changes or possible discontinuation. If available for ordering, purchases will be subject to an additional waiver at checkout, and are intended for early internal evaluation purposes only. These items are sold without warranties of any kind.

<sup>(3)</sup> **RoHS values:** Yes, No, RoHS Exempt. See the [TI RoHS Statement](#) for additional information and value definition.

<sup>(4)</sup> **Lead finish/Ball material:** Parts may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.

<sup>(5)</sup> **MSL rating/Peak reflow:** The moisture sensitivity level ratings and peak solder (reflow) temperatures. In the event that a part has multiple moisture sensitivity ratings, only the lowest level per JEDEC standards is shown. Refer to the shipping label for the actual reflow temperature that will be used to mount the part to the printed circuit board.

<sup>(6)</sup> **Part marking:** There may be an additional marking, which relates to the logo, the lot trace code information, or the environmental category of the part.

Multiple part markings will be inside parentheses. Only one part marking contained in parentheses and separated by a "~" will appear on a part. If a line is indented then it is a continuation of the previous line and the two combined represent the entire part marking for that device.

**Important Information and Disclaimer:** The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.

## TAPE AND REEL INFORMATION

\*All dimensions are nominal

| Device        | Package Type | Package Drawing | Pins | SPQ  | Reel Diameter (mm) | Reel Width W1 (mm) | A0 (mm) | B0 (mm) | K0 (mm) | P1 (mm) | W (mm) | Pin1 Quadrant |
|---------------|--------------|-----------------|------|------|--------------------|--------------------|---------|---------|---------|---------|--------|---------------|
| TPA2038D1YFFR | DSBGA        | YFF             | 9    | 3000 | 180.0              | 8.4                | 1.34    | 1.34    | 0.81    | 4.0     | 8.0    | Q1            |
| TPA2038D1YFFT | DSBGA        | YFF             | 9    | 250  | 180.0              | 8.4                | 1.34    | 1.34    | 0.81    | 4.0     | 8.0    | Q1            |

## TAPE AND REEL BOX DIMENSIONS

\*All dimensions are nominal

| Device        | Package Type | Package Drawing | Pins | SPQ  | Length (mm) | Width (mm) | Height (mm) |
|---------------|--------------|-----------------|------|------|-------------|------------|-------------|
| TPA2038D1YFFR | DSBGA        | YFF             | 9    | 3000 | 182.0       | 182.0      | 20.0        |
| TPA2038D1YFFT | DSBGA        | YFF             | 9    | 250  | 182.0       | 182.0      | 20.0        |
